Secure your country's success in AI development + Catch up US and China by cooperation

Game Objective & Flow

Circumstance

Determine your country's **domestic event** (D1) and the **international event** (I1) for this round. Hints are also provided here for the "Policy" stage.

Policy

Set your country's **AI industry policy**. This stage determines your country's **inherent growth rate of AI research papers**—for example, 174 papers per year.

Cooperation

Engage in **negotiations** with others to gain extra models and papers. Successful cooperation in international events grants **bonus outcomes**.

Events

You receive an additional domestic event (D2) and international event (D2). You are **allowed one policy revision**, including the option to betray previous commitments.

Summary

The **final outcomes** for each country, including the US and China, are presented in this section. See who cooperated, who betrayed, and who ultimately thrived.

Summary

 **SRT - AI Session Politics** ↗

Welcome to the 2025 SRT AI Politics session.

In this session, you are entrusted with the strategic leadership of your nation. *Your mission, should you choose to accept it, is to **secure your country's success***—whether through cooperation, competition, or isolation—in a world where artificial intelligence is becoming a defining force.

As a policymaker, you will **shape your nation's AI strategy** at home and abroad—crafting domestic policies and negotiating international cooperation, both of which directly impact the growth of influential AI research and the emergence of SOTA(State-of-the-Art) AI models.

Along the way, you must navigate the geopolitical tensions between the U.S. and China, deciding where your nation's loyalties lie—or choosing to remain neutral.

This message will self-destruct after login.

1_Circumstance

2_Policy

Welcome, team Korea

In this stage, you will define the **overall direction of your country's AI policy**. Your choices will directly influence the growth of notable academic papers which in turn accelerates the emergence of groundbreaking AI models such as ChatGPT or DeepSeek.

Each parameter belongs to a different policy category such as technical support, education, culture, stance, and diplomacy. You must allocate your 100 policy points across these options.

Note: **Willing_to_Cooperate** will play a key role during the cooperative parameter phase. All parameters will interact with future global or domestic events. Hover over each  icon to view a brief description of each parameter.

"Hope is not a strategy."

– August Walker, *Mission: Impossible - Fallout* (2018)

AI Paper annual growth rate $\propto$ (Technical * Human + Culture) * Fixed Conditions + Event Bonus

AI Model production rate $\propto$ Total AI Paper produced (NOT a linear function) + Event Bonus

An **approximate formula** for the inherent growth rate of AI research papers and models

(Technical * Human + Culture) * Fixed Conditions + Event Bonus

Example of Tech policy

Some parameters are used in later phases—for example, ***Willing_to_Cooperate*** is used during 3_Cooperation.

2_Policy

When successful...

 **Current Used Policy Points: 99 / 100**

 Fixed Conditions

Labor: 0.6

Natural_Resource_Reserves: Low

GDP: High

 Confirm Inputs

 Estimated Growth Rate of Notable Papers: 174 per round

your country's **inherent growth rate of AI research papers**

If not,

 **Current Used Policy Points: 104 / 100**

 Fixed Conditions

Labor: 0.6

Natural_Resource_Reserves: Low

GDP: High

 Total exceeds 100 policy points. Please adjust.

3_Cooperation

Korea - Cooperative

Parameters ↔

In this phase, you will manage your nation's **cooperative AI strategy**—deciding how much to share, whom to partner with, and what kind of global AI initiatives to support.

You can choose to share computing power, data, talent, or energy. You may also form joint projects or align with international AI standards. Each decision impacts how much your country contributes to and gains from global AI advancement.

Your willingness to cooperate gives you points to spend on agreements. Cooperative actions require mutual agreement between nations, so choose your offers wisely.

You might face a **Prisoner's Dilemma**, where sharing resources like semiconductors benefits both sides—but only if trust isn't broken. Or a **Stag Hunt** might happen, where major gains are possible only when both nations commit fully. Or else, you might find yourself in a **Chicken Game**, where refusing to join a joint project leads to a dangerous standoff if no one backs down. Choose wisely.

"I just want everyone to get along. With me, especially."

– *White Widow, Mission: Impossible – Dead Reckoning (2023)*

In this phase, you should meet with other countries and **engage in negotiations** for cooperation.

There are three types of cooperation:

- (1) Resource Sharing,**
- (2) Emergency Pact, and**
- (3) Joint Projects.**

3_Cooperation

 **Cooperation Matrix**

	Parameter	Base Points	Japan	Taiwan	Mongolia
0	Data Shared	1	No	No	No
1	Talent Shared	2	No	No	No
2	Emergency Pact	3	No	No	No
3	Joint Research	3 ~ 5	None	None	None
Total	Used Points		0	0	0

Total Points Used: 0 / 15

Base point 10

This pops up after you select joint project and update agreement

Move on to the next page

3_Cooperation

If all agreements are met...

Confirm All Cooperative Parameters

All agreements are mutual! Points used: 4/15. Proceeding to the Event Phase...

If not ...

Confirm All Cooperative Parameters

Confirmation failed. The following agreements are not mutual:

Disagreement with Japan on 'Joint_Research_Project': (You: None | Them: Military)

Disagreement with Mongolia on 'Emergency_Pact_Semiconductor': (You: True | Them: False)

4_Event

Roll the dice to determine your second Domestic event

Event Phase

While you were busy shaping your nation's grand AI strategy in the political arena, life back home did not wait. **Unexpected domestic events**—both large and small—have unfolded independently of your decisions. These events can dramatically affect your nation's capacity to produce groundbreaking AI papers and models.

Now, it's time to discover what has happened within your borders...

"We just rolled up a snowball and tossed it into hell. Now let's see what chance it has." > - *Ethan Hunt, Mission: Impossible II (2000)*

Domestic Event Roulette

Domestic Event: Regional Compute Allocation Bias

 Semiconductor subsidies are funneled only to megacities, creating regional imbalances in AI compute access. When Deployment_Infrastructure is weak in rural areas, and Semiconductor capacity is concentrated, smaller regions are left behind. This limits their ability to contribute to AI research and model training. Real-world examples include South Korea's and China's concentrated chip investments in urban hubs, which widened the tech gap between core and peripheral regions.
